

Software Testing Internal Exam - Answer Sheet

Q1 Answers:

- a) Features of Bugzilla: (1) Advanced searching (2) Email notifications
- b) Error: A human mistake in coding that leads to incorrect results.
- c) Bug tracking tools: Jira, Bugzilla
- d) Code Coverage = $(\text{Executed lines} / \text{Total lines}) \times 100$
- e) Software Testing: Process of executing software to find bugs.

Q2 Answers:

- a) Entry Criteria: Conditions before testing starts (system ready, data available).
Exit Criteria: Conditions to stop testing (all test cases executed, no major bugs).
- b) Extra Coding: Adding unnecessary features.
Wrong Coding: Incorrect implementation.
Missing Coding: Required feature not implemented.
- c) Test Case in Excel: Create table with ID, Steps, Input, Expected Result, Actual Result, Status.

Q3 Answers:

Statement Coverage = $(\text{Executed Statements} / \text{Total Statements}) \times 100$

For given test cases, both positive and negative paths are executed → Coverage = 100%

Q4 Answers:

- a) Bug tracking tools: Jira, Bugzilla, Redmine, Mantis.
Example: Jira is used to track and manage bugs.
- b) Difference:
Specification-based (Black Box): Based on requirements, no code knowledge.
Structure-based (White Box): Based on internal code and logic.
